

On the Subject of Simon Stumbles

With the amount of talking he does, this was bound to happen.

On the module there are four colored directional buttons as well as a center button, also known as the "stumble" button. To solve the module, you must progress through the five stages.

- To start the module, press the stumble button. Note down the initial colors of the buttons.
- If an input in the previous stage required you to press the stumble button, or there was not a previous stage with that flash, lookup the flashing color and position on the table below to find which button to press. Otherwise, you may press the previously pressed color.
- If you press the same color or position that flashed or is stated, you must press the stumble button after that input.
- **However**, if at any point the current colors displayed are the same as the initial colors displayed, press the flashing colors and press stumble after the last input. Consider all presses to have **not** required the stumble button.

		Position Flashing			
		Up	Left	Right	Down
Color	Red	Down	Up	Right	Left
	Yellow	Right	Left	Up	Down
	Green	Up	Down	Left	Right
	Blue	Left	Right	Down	Up

Note: If you strike, the module will display the initial colors. After pressing the stumble button, you must restart from the beginning of the stage that you were on and use the table for all inputs.
